

TenderRisk Debug Checklist

This short document is a test file to confirm document sharing and PDF conversion are working.

Current issues

- `grounding.py` must not import itself.
- `service.py` must strip extra fields such as `recommended_action` and `missing_protections`.
- `missing_points` must start with `Not found in provided clauses:.`
- `page`, `heading`, and `raw_excerpt` must match the cited clause exactly.

Quick run steps

1. Save the corrected `grounding.py`.
2. Save the corrected `service.py`.
3. Run from project root:

```
$env:PYTHONPATH="src"  
python test_analysis.py
```

Expected result

The analysis should validate without `extra_forbidden`, JSON parsing, circular import, or grounding errors.
